

Khrystyna Hrytsiv

Junior Front-End developer

Summary

Junior Frontend Developer specializing in React and Next.js with strong focus on scalable architecture, performance optimization, and clean component design. Experienced in building full-featured CRUD applications with authentication, filtering, dynamic routing, and server-side rendering.

Comfortable working with TypeScript, REST APIs, and modern state management patterns. Focused on writing maintainable, reusable code and building production-ready interfaces.

Experience

November 2021- June 2023

Nestle, Nespresso

Junior Specialist in Business Order Administration

- Worked in cross-functional international environment
- Managed structured data processes with high accuracy requirements
- Improved internal workflow efficiency through process optimization
- Collaborated across teams under strict deadlines.

Education

September 2019 - June 2023

Lviv Polytechnic National University

Bachelor of International Economics Relations

February 2025 - October 2025

Full Stuck Course from Okten School

Pet Projects

Movie Discovery Applicatin (React) — [GitHub](#)

Interactive movie browsing platform with advanced filtering and pagination.

- Built responsive UI with reusable component system
- Implemented search, filtering, and pagination logic
- Managed global state using Redux Toolkit
- Optimized API calls and prevented unnecessary re-renders
- Integrated external REST API

Stack: React, TypeScript, Redux Toolkit, CSS Modules, Axios, REST API

Technical Skills

- HTML/CSS
- JavaScript
- TypeScript
- React
- React Router, Redux Toolkit, React Hooks
- Rest API
- Axios
- SQL
- MongoDB
- Git, GitHub
- Next.js
- Tailwind
- Material UI
- styled-component

Language

English: Intermediate

Ukrainian: Fluent

Soft Skills

- Self - motivated
- Teamwork
- Communication
- Stress resistance
- Time management

Full-Stack Wishes Platform (Next.js) – [GitHub](#)

Production-like CRUD application with dynamic routing.

- Implemented full CRUD functionality with protected routes
- Structured scalable folder architecture using feature-based approach
- Built reusable UI components to ensure consistency across pages
- Implemented dynamic routes with server-side rendering
- Optimized component re-renders using memoization techniques
- Integrated REST API with type-safe data handling

Stack: Next.js, TypeScript, Tailwind, Context API, JSON Server
